

# Super Inverter Ceiling Cassette Systems

Our EASYfit Inverter ceiling cassette air conditioner comprises two elements – an internal unit and an external unit. The internal unit is fitted into the ceiling in the room to be cooled, whilst the external unit is situated outside the building. The two are connected using copper pipe. The external unit, or condenser, removes the heat from the room and dissipates it outside, along with any condensation that's built-up in the system, whilst the internal unit provides cooling.
